SAARA & SOUL

# Website Process Sheet

*Design decisions • validation evidence • Lighthouse hand-off*

## Project overview

Saara & Soul is a handmade home-decor storefront with four pages: Home, About, Collections and Contact. The visual direction uses an earthy, heritage-inspired palette, generous spacing, editorial serif headings and a clean sans-serif interface. The supplied HTML/CSS was reviewed and a working copy was prepared for local checks; the original uploads were left unchanged.

## Design process

### 1. Structure

Separate pages give visitors clear paths to the brand story, product categories and contact form. Semantic headings, navigation labels and a skip-to-content link support scanning and keyboard use.

### 2. Visual hierarchy

Large serif headings establish an editorial mood; small uppercase eyebrow labels and compact button text provide secondary hierarchy. The clay header and high-contrast call-to-action buttons keep navigation and shopping actions visible.

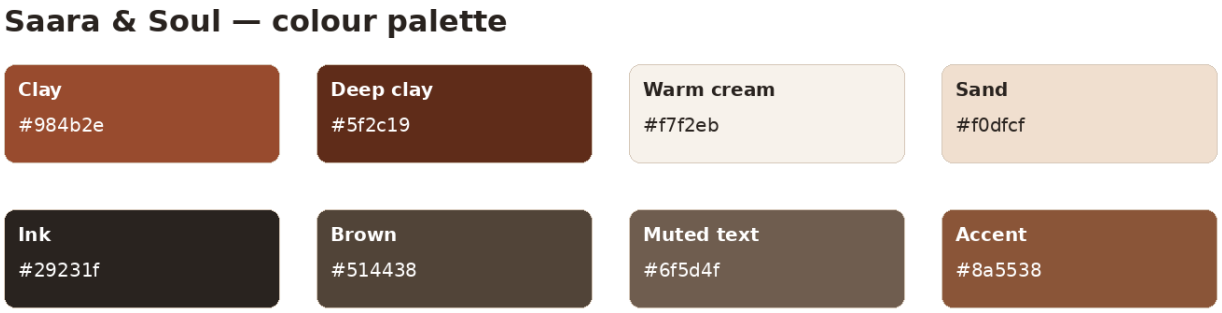

### 3. Responsive layout

CSS grid and flex layouts adapt at 900px and 560px breakpoints. The navigation collapses to a checkbox-driven menu on smaller screens; product/category grids reflow to fit narrower viewports.

### 4. Performance choices

The stylesheet specifies system font stacks and comments that no external font or request is required. Images declare dimensions and use lazy loading where appropriate. Actual performance still depends on supplying optimized image assets and hosting.

# Colour choices and reasons

| Colour / token | Use | Reason |
|---|---|---|
| **Clay #984B2E** | Header, buttons, brand accent | Warm terracotta links the identity to handmade materials and earthy decor; strong visual anchor. |
| **Deep clay #5F2C19** | Hover states, dark surfaces | Adds depth and keeps interactive states distinct from the base clay. |
| **Warm cream #F7F2EB** | Main page background | Soft alternative to pure white; reinforces a calm, tactile, home-oriented feel. |
| **Sand #F0DFCF** | Trust strip and supporting surfaces | Gentle section separation without introducing a cold or high-contrast block. |
| **Ink #29231F** | Primary body text | Near-black provides readable text while harmonizing with the warm palette. |
| **Brown #514438 / muted #6F5D4F** | Secondary copy | Keeps supporting information softer while maintaining an earthy tone. |
| **Accent #8A5538** | Eyebrows and small highlights | Coordinates with clay while creating a separate role for metadata and section labels. |

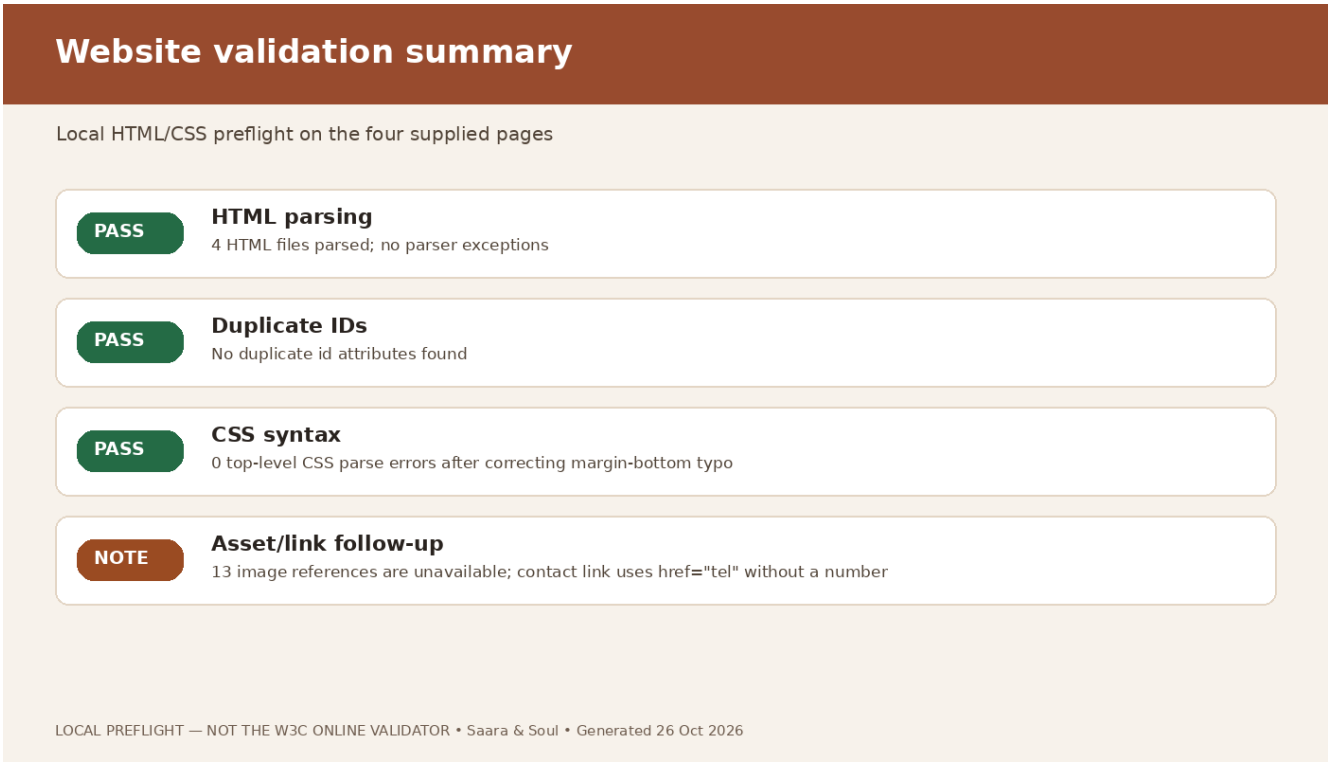

Contrast note: the palette is a design rationale, not a verified WCAG result. Check text/background combinations—especially small accent text—using a contrast checker and the final rendered site.

# Font choices and reasons

| Font stack | Applied to | Reason |
|---|---|---|
| **Georgia, "Times New Roman", serif** | h1–h3, brand wordmark, selected labels | Classic editorial character feels crafted and timeless; serif headings create contrast against the functional body text. |
| **system-ui, -apple-system, "Segoe UI", Roboto, Arial, sans-serif** | Body copy, navigation, buttons, form controls | Native system fonts load quickly, remain familiar and readable, and avoid external font requests. |
| **Italic Georgia** | Brand tagline / small signature moments | Adds a human, boutique feel without introducing a third font family. |

# Validator evidence

The screenshot below records a local preflight, not a result from the W3C online validator. It checks HTML parsing, duplicate IDs, and CSS syntax. The CSS typo `margin: bottom 0.9rem;` was corrected to `margin-bottom: 0.9rem;` in the working copy before checking.

## Items to resolve before calling the site production-ready

- The supplied package does not include the referenced assets/images/*.PNG files. Add the real product/hero images before final visual, accessibility or performance testing.
- The contact page has an incomplete phone link (`href="tel"`); use a complete `tel:+919784435745` target.
- The form action and newsletter action point to `hello@saaraandsoul.example`, which is a placeholder domain. Replace it with a real mailbox or hosted form endpoint.
- Social links currently use `href="#"`; replace them with the brand’s actual profile URLs.
- The uploaded files reference `style.css` and page names such as `home.html`; these names were normalized in the working copy for local review.

# Lighthouse evidence and next steps

An official Lighthouse run could not be captured in this environment: the Lighthouse package is not installed and package/network access was unavailable. To avoid inventing scores, the image below is a status snapshot, not a Lighthouse report or score screenshot.

## How to capture the requested Lighthouse screenshots

1. Put the complete site and image assets on a local server or staging URL.
2. Open the page in Google Chrome, then open DevTools → Lighthouse.
3. Select Mobile (and optionally Desktop), choose Performance, Accessibility, Best Practices and SEO, then click Analyze page load.
4. Capture the generated score summary and each audit detail panel. Repeat for Home, Collections and Contact if evidence is required for every page.
5. Attach the unedited screenshots and record the tested URL, date, device profile and Lighthouse version in this document.

## Evidence limitation

No official online validator result, Lighthouse score, or real browser screenshot is claimed in this sheet. The local preflight is useful preliminary evidence, but the missing image files and placeholder links should be fixed before final external validation.

# Client details

The details below are taken from the supplied website content or are clearly marked as reasonable inferences. Confirm business contact details and audience assumptions with the client before final submission or launch.

| Field | Client / project detail | Basis |
|---|---|---|
| Brand name | Saara & Soul | Shown in supplied website files |
| Business type | Handmade home-decor / lifestyle storefront | Inferred from the product collections and brand presentation |
| Website purpose | Introduce the brand, present collections, share the brand story, and provide a contact route | Supported by the four supplied pages |
| Intended audience | People interested in handmade, warm, earthy and boutique-style home décor | Design/content inference; confirm with client |
| Brand personality | Warm, crafted, calm, timeless and heritage-inspired | Inferred from palette, typography and copy direction |
| Main user actions | Explore collections, learn about the brand, and contact the business | Supported by Home, About, Collections and Contact pages |
| Primary pages | Home, About, Collections, Contact | Present in supplied HTML files |
| Contact details | A real email address, phone number and social profile URLs still need client confirmation | Current source includes placeholder/incomplete links |
| Visual identity | Terracotta/clay, cream, sand and ink; serif headings with system sans-serif body text | Based on supplied CSS and design choices |

# Five client discovery questions and draft answers

These are suggested questions for the client and draft answers inferred from the supplied website. They were not provided as a verified client interview, so confirm or replace each answer with the client's actual response.

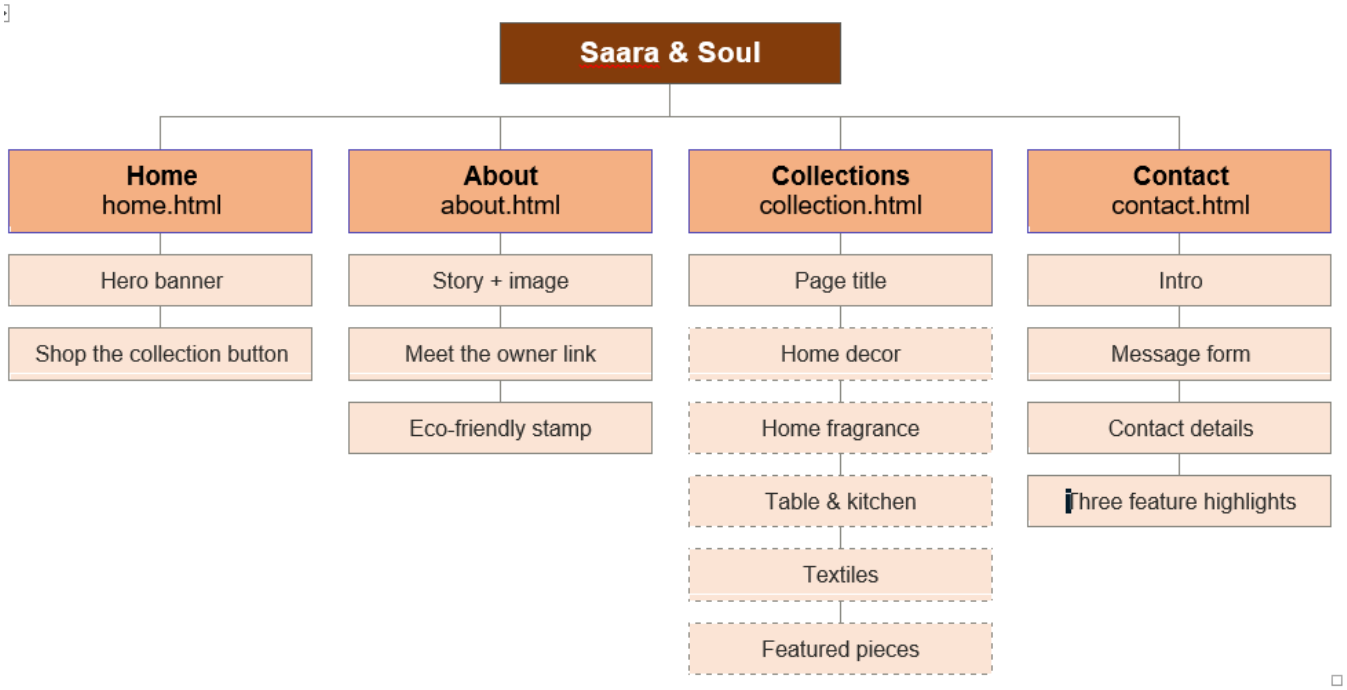

| # | Question to ask the client | Draft answer based on the website |
|---|---|---|
| 1 | What is the main goal of the website? | To introduce Saara & Soul, showcase its collections, communicate the brand story, and make it easy for visitors to get in touch. |
| 2 | Who is the target audience? | Likely customers who appreciate handmade or boutique home décor and a warm, earthy visual style. The client should confirm the intended customer groups. |
| 3 | What feeling should the brand communicate? | Warm, calm, crafted, timeless and heritage-inspired, supported by terracotta, cream, sand tones and editorial serif headings. |
| 4 | What information should visitors find on the website? | An introduction on Home, the brand background on About, product/category browsing on Collections, and contact/enquiry information on Contact. |
| 5 | What details are needed before launch? | Confirm real email and phone details, social media URLs, final product/hero images, any form or newsletter handling, and the final product/collection content. |

# Client confirmation checklist

- Confirm the target audience and whether the site will support online checkout or only showcase collections.
- Provide final logo/brand assets and the missing image files referenced in the HTML.
- Confirm the real email address, phone number and social media profile URLs.
- Confirm product names, descriptions, prices (if shown), and collection categories.
- Confirm how contact and newsletter forms should submit and where enquiries should be delivered.

*Note: Client details and draft answers are provisional where the supplied source files do not state them explicitly.*

# Sitemap

**Shared on every page**

**Header**

Nav links, logo, search / account / bag / wishlist icons

**Footer**

Shop, Collections and About links, newsletter, social icons

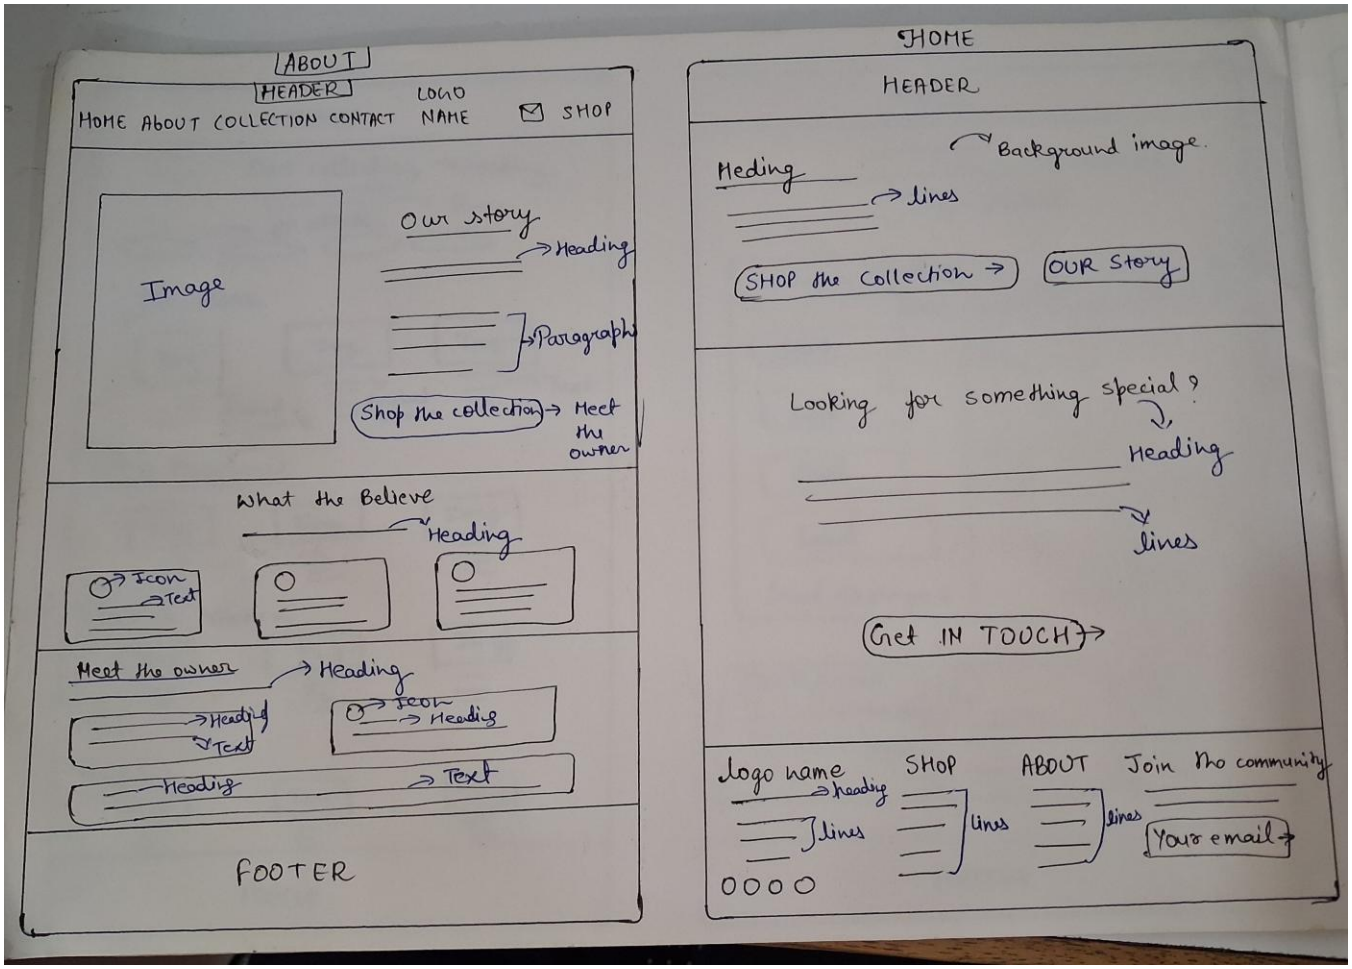

Page | Section on page | Placeholder or unlinked (#) | Shared on every page

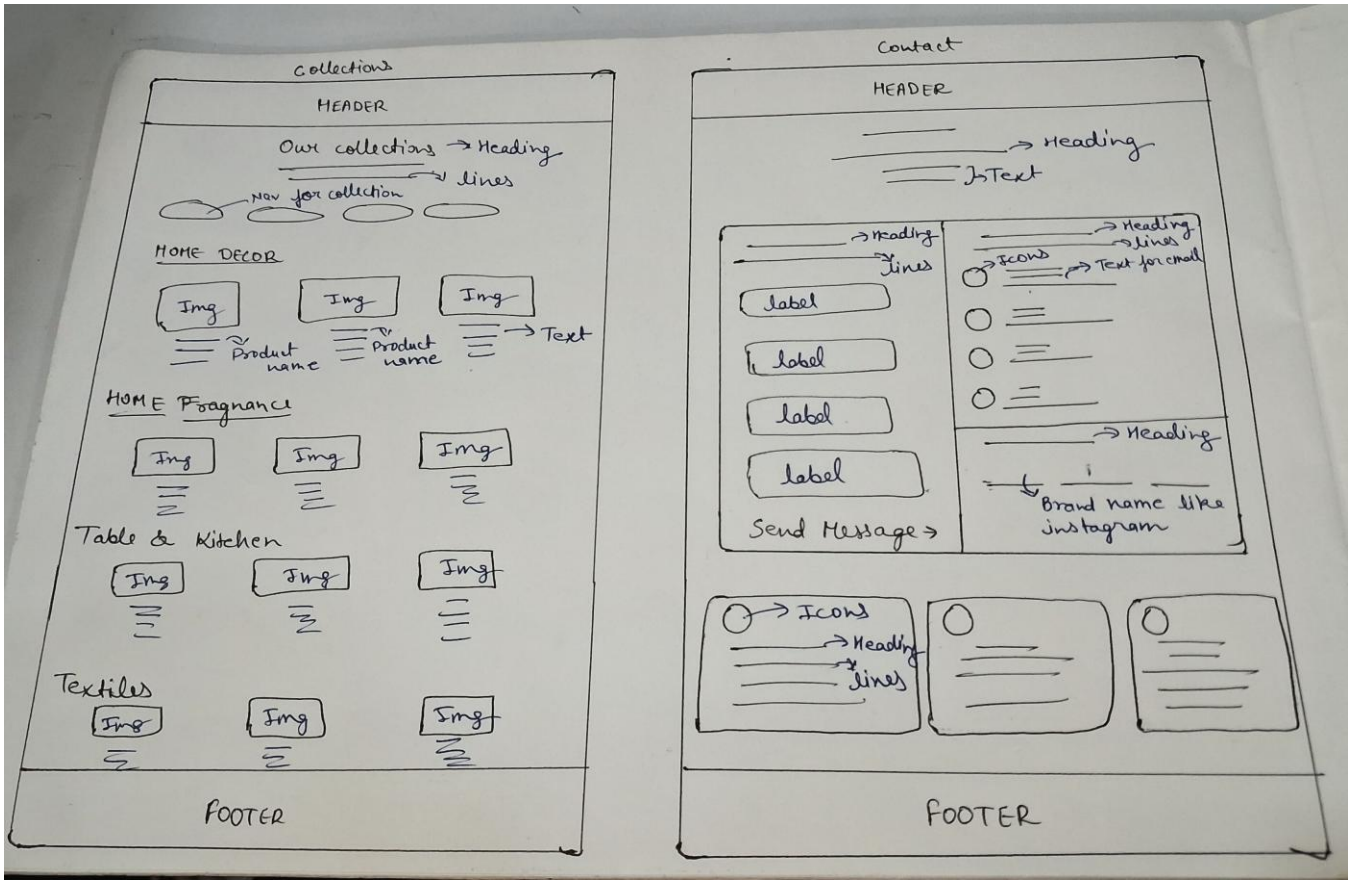

## Still to build

- Category pages or filters for Home decor, Home fragrance, Table & kitchen and Textiles (the Shop now links use #).

- Real products, names and prices in Featured pieces.
- An owner section, since Meet the Owner currently opens the Contact page.
- Pages or sections for Sustainability, Our Materials, New Arrivals, Best Sellers and Gifts.
- Search, account, bag and wishlist pages, plus real social links and your shop address and phone number.
